

## **GERMINATING VEGETABLE SEEDS**

### Supplies:

Seeds, potting soil, containers, a clean spray bottle for watering.

### Instructions:

Put 2 seeds in a cup of soil. Sprinkle a little soil over the seeds. Keep the seeds moist by spraying them with water. It is important to keep them moist. Germinating seeds do not need sunlight; however, they do need to be in a place where the soil will remain cool.

As soon as plants germinate, gently remove the second plant and discard. At this time plants can be placed in a partly sunny spot and kept moist until they are big enough to be planted.
